

EU AI ACT · ARE YOU READY?

Are you ready to **prove** how you govern AI?

The clock is ticking. Most teams still don't have a credible answer to one basic question your board, your regulator, and your auditors will all ask in 2026.

EU AI ACT TIMELINE

The dates are no longer **abstract**.

2 FEB 2025

Prohibited AI practices banned

+ AI literacy obligations apply. **Already enforceable.**

2 AUG 2025

GPAI model obligations & national authorities

Penalties framework active. **Already enforceable.**

2 AUG 2026

High-risk AI obligations under Annex III

Conformity assessment, logging, oversight, FRIA. **Operative unless Omnibus is adopted.**

2 AUG 2027

Product-embedded AI systems (Annex I)

Medical devices, automotive, industrial — full applicability.

WHAT THE ACT EXPECTS

7 things enterprises must be able to prove.

- 1 You know where AI is used — systems, models, agents, shadow tools
- 2 You manage AI risk continuously — not just in a slide deck
- 3 You govern data going into AI — PII, PHI, IP, source, financials
- 4 You have clear policies and controls — with enforcement evidence

WHAT THE ACT EXPECTS (CONT.)

The other 3 pillars.

5 Human oversight & accountability — roles, approvals, separation of duties

6 You log, monitor, and investigate AI behavior — usage, violations, incidents

7 You govern vendors and GPAI — OpenAI, Anthropic, Azure, internal models

Each pillar maps to specific Articles in the Act — and to specific evidence a regulator can demand on short notice.

COST OF BEING UNPREPARED

7%

of global annual turnover

Maximum penalty under the EU AI Act for prohibited AI violations — *higher than GDPR's 4%*.

\$670K

added to each shadow-AI breach

1 in 5 enterprise breaches now involves unsanctioned AI (*IBM Cost of a Data Breach, 2025*).

HOW GOVERN360 MAPS TO THE EU AI ACT

One platform. All seven pillars.

Govern360 is the **vendor-neutral AI governance control plane** — the policy brain that compiles your governance intent into the enforcement tools you already own (Microsoft Purview, Intune, your SASE, your AI gateway), and produces verified evidence regulators can inspect.

No new chokepoint. No traffic proxy. No standing write credentials. **Just one control plane, one inventory, one evidence trail.**

FOR SECURITY & DATA LEADERS

Who needs **what.**

For CISO & CIO

AI Inventory & Shadow AI — live map of every AI tool, model, agent and consumer app touching your environment.

SIEM streaming — every AI event into your SOC for monitoring and incident response.

For CDO & Head of AI

Data Posture & Data Shield — which data classes (PII, PHI, PCI, source) are going into which AI systems.

Architecture & coverage views — where guardrails exist, and where they don't.

For General Counsel & Risk

Risk Registry & Behavioral Risk — a living registry, not just an annual review.

Compliance Mapping — EU AI Act, ISO 42001, NIST AI RMF in one place — with evidence behind every status.

For all of the above

Policies & Controls — who can use which AI, for what, with which data.

Vendor Risk — assurance status for OpenAI, Anthropic, Azure, and every model in use.

ONE NUMBER EXECUTIVES RALLY AROUND

The Govern360 AI Posture Score.

LIVE AI GOVERNANCE POSTURE

87

RISK

COMPLIANCE

COVERAGE

VENDOR

BEHAVIOR

Think Secure Score — but for AI governance. A posture metric your board can track, your teams can move, and your auditors can inspect.

IF YOUR ORGANIZATION CAN'T YET

You're on the **back foot.**

- 1 List your AI systems — including shadow AI
- 2 Show where sensitive data flows — in real time
- 3 Explain how AI risk is managed — with live evidence
- 4 Prove who is accountable — for each AI decision

Govern360 turns “we're working on AI governance” into “here is our live, measurable posture — and here is how we're improving it.”

READY TO SEE YOUR LIVE AI POSTURE?

Get your AI governance score in 14 days.

Free 14-day pilot. Read-only access. No prompts stored. No credit card.
Connect in minutes. Get your AI inventory, shadow-AI risk, and a sample compliance
report before you commit to anything.
